Dear Hiring Manager,

I'm reaching out to express my interest in joining your team. With close to five years of hands-on experience in SQL engineering, backend development, and data platform work, I feel like I've built a solid foundation—and I'm genuinely excited about where I can take things next.

In my current role at iBasis India, I work across a fairly broad stack—Python, Oracle, PostgreSQL, and Kubernetes—and the problems I deal with are rarely straightforward. Whether it's tuning a slow query that's been quietly hurting performance for months or rebuilding a data pipeline that's become a bottleneck, I tend to dig into the root cause rather than just patch things. One of the things I'm most proud of recently is an AI-driven automation project where I helped build a system that auto-triages support tickets from emails and calls. It saved around 12–15 hours of manual work per week, which is the kind of impact that actually sticks with you.

Before moving into SQL engineering, I spent a couple of years as a Build Engineer, which gave me a strong appreciation for the CI/CD side of things—how releases are structured, how deployments can go wrong, and why observability matters. I think that cross-functional perspective has made me a better engineer overall. I'm comfortable working in Linux environments, I've set up and maintained monitoring with Prometheus and Cacti, and I've contributed to significantly reducing incident response times on my current team.

I'm someone who genuinely enjoys solving hard data problems and building things that hold up at scale. I'm also comfortable in cross-functional settings — I've worked closely with operations, product, and vendor teams throughout my career, and I think clear communication across those boundaries makes a real difference in how quickly issues get resolved.

I'd love the opportunity to learn more about what your team is working on and talk about how I might contribute. Please feel free to reach out at any time — I'm happy to chat or answer any questions you might have.

Thank you for your time and consideration.

Warm regards,

Medi Pavan Kumar
